**Tiki registrations: Passcode to register + JQ show it for humans**

An easy trick (by luci: thanks!)

1. Enable the option **"Passcode to register"** (Admin home > Login > ...)

2. Code to add before the end `< /body >` tag. *(Admin home > L & F > Customization > Custom end code)*:
   1. If you are using some user tracker to collect more information from users at registration time, use this code:
      
      ```
      {if $mid eq "tiki-register.tpl"}{jq}($form[name='editItemForm1']).prepend("<b>Passcode to Register / Codi de pas per registrar-se:</b> <i>foo</i>bar<br/>"){/jq}{/if}
      ```
   2. If you just use the basic registration form by default (no user tracker to collect more information from users at registration time), then use this other code:
      
      ```
      {if $mid eq "tiki-register.tpl"}{jq}($form[name='RegForm']).prepend("<b>Passcode to Register / Codi de pas per registrar-se:</b> <i>foo</i>bar<br/>"){/jq}{/if}
      ```
